

1. Can you describe your experience with accessibility to different tools and technologies that are essential for your work?
2. Is there a difference in accessibility based on the country you are working in now?
3. If so, how do those restrictions impact your ability to grow in your field, and how do you react to them?
4. How does the work environment and company culture in your home country compared to that in your host country?
5. How supportive are these environments in terms of hindering or supporting women?
6. Have you experienced any challenges related to gender bias or discrimination in both countries?
7. How do societal views towards a woman working or studying as an engineer differ between developing and developed countries?
8. Do these views have an impact on you?
9. If so, how did they impact your professional or personal confidence and career opportunities?
10. Can you tell us about the balance between work and life in each context?
11. In these contexts, are there factors related to flexible work arrangements, family support, or even childcare?
12. In each context, is there accessibility to female role models or a network of professionals?
13. If so, how do they influence your mindset, purposes, and career path?
14. Based on your experience, what are the effective ways to address the challenges women face in the field of engineering in developing countries?
